

Dear Hiring Manager,

I hope you are doing well. I am interested in applying for the Unity Game Developer position at your company.

I have been working with Unity for over four years and have experience developing both 2D and 3D mobile games for Android and iOS. Most of my work has focused on hybrid casual games, where I worked on gameplay features, optimization, UI systems, and overall game performance.

Currently, I am working at Riseup Labs as a Unity Game Developer. My responsibilities include developing prototypes, optimizing game performance and build size, integrating SDKs, and creating reusable systems and custom tools inside Unity. I also work closely with team members using Git in a collaborative development environment.

Before this, I worked at IDARE Bangladesh Ltd as a Digital Twin Engineer using Unity for 2D/3D visualization systems and multi-user collaboration projects. These experiences helped me improve both my technical and problem-solving skills.

I have also worked with publishers like Voodoo, YSO, and Moonee. One of my games, "Balls Collect Mania," reached more than 50K downloads, and I have contributed to several other published and upcoming titles as well.

I enjoy building games that feel smooth, polished, and fun to play. I am always interested in learning new things and improving my skills as a developer. I believe my experience and passion for game development would allow me to contribute positively to your team.

Thank you for your time and consideration. I would love the opportunity to discuss my experience further.

Sincerely,
Sakhawat Hossain
